Summary : As a newly graduated and junior software/Web developer, I'm enthusiastic about embarking on my journey in computer development. Despite being new to the field, I possess a solid understanding of the fundamentals and am eager to expand my knowledge. Technology intrigues me, and I am committed to continuous learning and advancement.

Experience

Uber Delivery Driver
Autonomous / Student Job

Key Projects

React Booking System :

Full Stack (MERN):

- Created a user-friendly React interface for hotel booking, ensuring an intuitive reservation experience.
- Developed a robust Node.js API for efficient data and reservation management.
- Implemented MongoDB database to store comprehensive hotel information, enhancing platform functionality.

https://github.com/Yanis312/Booking_Mern

Developing Amazon Clone:

Full Stack (Vue.js & Node.js):

- Created an Amazon-style e-commerce site using Vue.js and Node.js, focusing on a user-friendly design for easy navigation.
- Built comprehensive e-commerce platform featuring product browsing, cart management, and secure checkout, mirroring Amazon's functionality.
- Ensured the project's end-to-end functionality, covering user interactions, cart management, secure payments, and deployment on AWS with image storage using S3.

https://github.com/Yanis312/Amazon-Clone

Various Restaurants Websites :

Full Stack :

- Designed and developed a user-friendly website for a restaurant,providing seamless navigation and an engaging interface.
- Implemented a comprehensive online system allowing customers to effortlessly reserve tables for dining and place orders for both dine-in and takeout.
- Incorporated e-commerce features and a variety of third-party APIs to enable customers to browse the menu, select items, and securely purchase meals online for delivery or pickup.

https://github.com/Yanis312/Good-Food1
https://github.com/Yanis312/good-Food2

College Management Desktop Application :

C# AND xaml :

- Created a desktop application using C# and Visual Studio Community for efficient college management.
- Developed a search functionality to explore and retrieve details of all available programs offered by the college.
- Implemented features for accessing and managing lists of students, providing a centralized platform for streamlined administration.

https://github.com/Yanis312/schoolApp

Responsive Modern Portfolio :

React 18 :

- Advanced React Features: Utilized Context API, React Portals, and Re-Usable Components for a modular codebase.
- Personalization and Interaction:I ncorporated persistent Theme Customization to local storage, SwiperJS carousel/slides, and Filtering for an interactive experience.
- CSS Proficiency: Applied CSS3 Variables, Flexbox, Grid System, and Media Queries for responsive design.
- User Interface Enhancement: Designed an elegant Floating Navbar to elevate the user interface.
